

# Clinical Placement in Study Programme “Physiotherapy”

---

Clinical placement in the study programme “Physiotherapy” will be conducted provided in:

- hospitals – for children and for adults, and specialized traumatology hospital
- multi-professional rehabilitation centres, and
- smaller private ambulatory rehabilitation centres.

The hospitals and centres are located in Riga. All in all, students do placements, spending 1 month in each placement. It is also possible to arrange 3-month placements.

We are experienced in organising clinical placements for international students: our fourth year students will help you with language issues and other things. Our clinical instructors have a good command of English and they will explain all the necessary things regarding the placement.

Clinical placements are organised according to the following scheme: 5 days a week for 6 academic hours every working day. Throughout this period, students have to spend their time in hospitals or rehabilitation centres and, additionally, deal with paperwork and prepare for the placement. Every clinical placement has documentation that needs to be filled in for ERASMUS+ exchange students.

We have the experience and the possibility to offer and organise clinical placements in orthopaedics (mostly for adults), neurology (adults and children), paediatrics and internal diseases in hospitals and rehabilitation centres.

If you are interested in a specific field and have special wishes for your placement, please let us know so we can try to arrange it.
