Discounting Models in Behavioral Health Economics and Quantitative Health Psychology

The purpose of this Research Topic is to encourage the research on time preferences (or discounting models) and their links with health-related behaviors or with policies to promote healthy behaviors, as shown by (1–4).

It has been suggested that behavioral economics is an important factor for improving the healthcare system [e.g., (5)], but relatively little progress has been made when compared to retirement policy. Some governments, like the UK and US, have made efforts to incorporate the behavioral economics approach into policy-making. The goal is to nudge citizens to increase organ donations or to encourage the payment of fines and taxes. There are examples of the successful applications of concepts from behavioral economics being implemented into public health policy to improve health attitudes and behaviors (e.g., the Behavioral Insights Team, the Penn Medicine Nudge Unit).

In the framework of time discounting, we can find time inconsistent preferences (1) and time
