Networking and managing networks

Timo Järvensivu

D.Sc.(Econ), researcher and entrepreneur

Aalto University School of Business

nommoC seugolaiD cooperative

TyhyverkostoX project member in collaboration with
the Finnish Institute of Occupational Health

Basic modes of organizing

Hierarchy: authority, in-depth knowledge exchange, clear division of labour, clear contracts

→ Getting complex routines done effectively, with structured learning

Network: trust, in-depth knowledge exchange, flexible division of labour, flexible commitments
→ Enabling creativity and new discoveries, increasing flexibility, with unstructured learning

Markets: buyer-seller contracts, light knowledge exchange, clear division of labour
→ Getting simple routines done effectively

Network organizing is...

Openness → open community, open knowledge exchange...

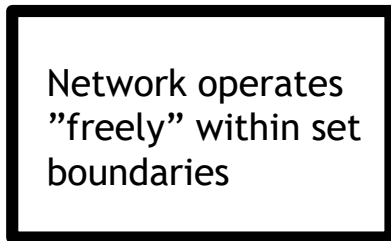

Autonomy → freedom to make decisions and choose ways or operating...

Trust → the continuity and success of cooperation is based on trust among the actors

Relationships between hierarchies and networks

Tightly managed strategic networks, "top down" management

Hierarchically set formal rules of cooperation

Freely developing, emerging networks, "bottom up" coordination

No formal rules but a more loose sense of (unspoken) common norms

Co-managed networks, "bottom up" management

Collectively set formal rules (and unspoken norms) for cooperation

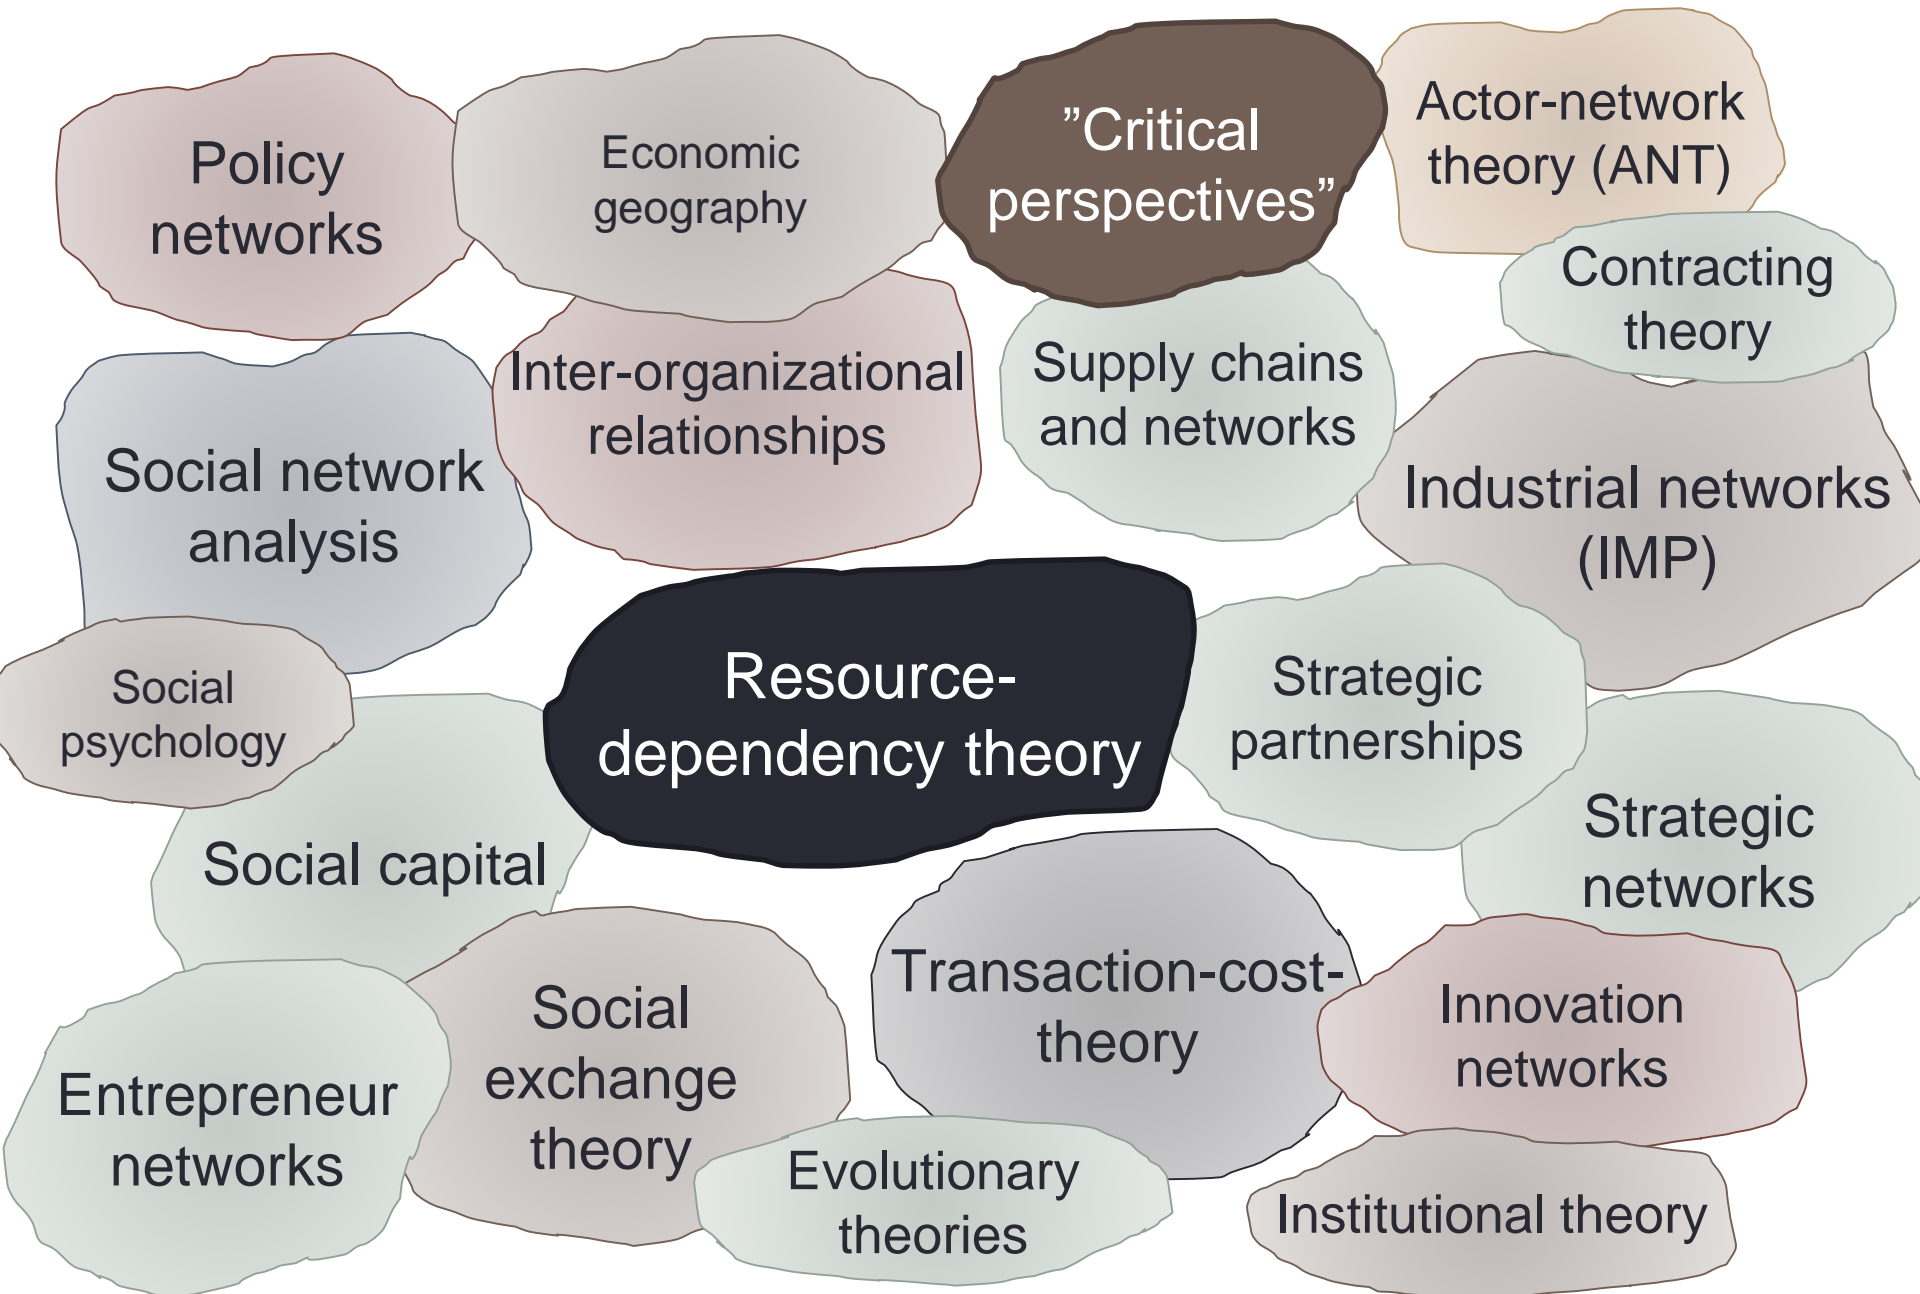

Chaotic organizing, no coordination between autonomous (hierarchical) units

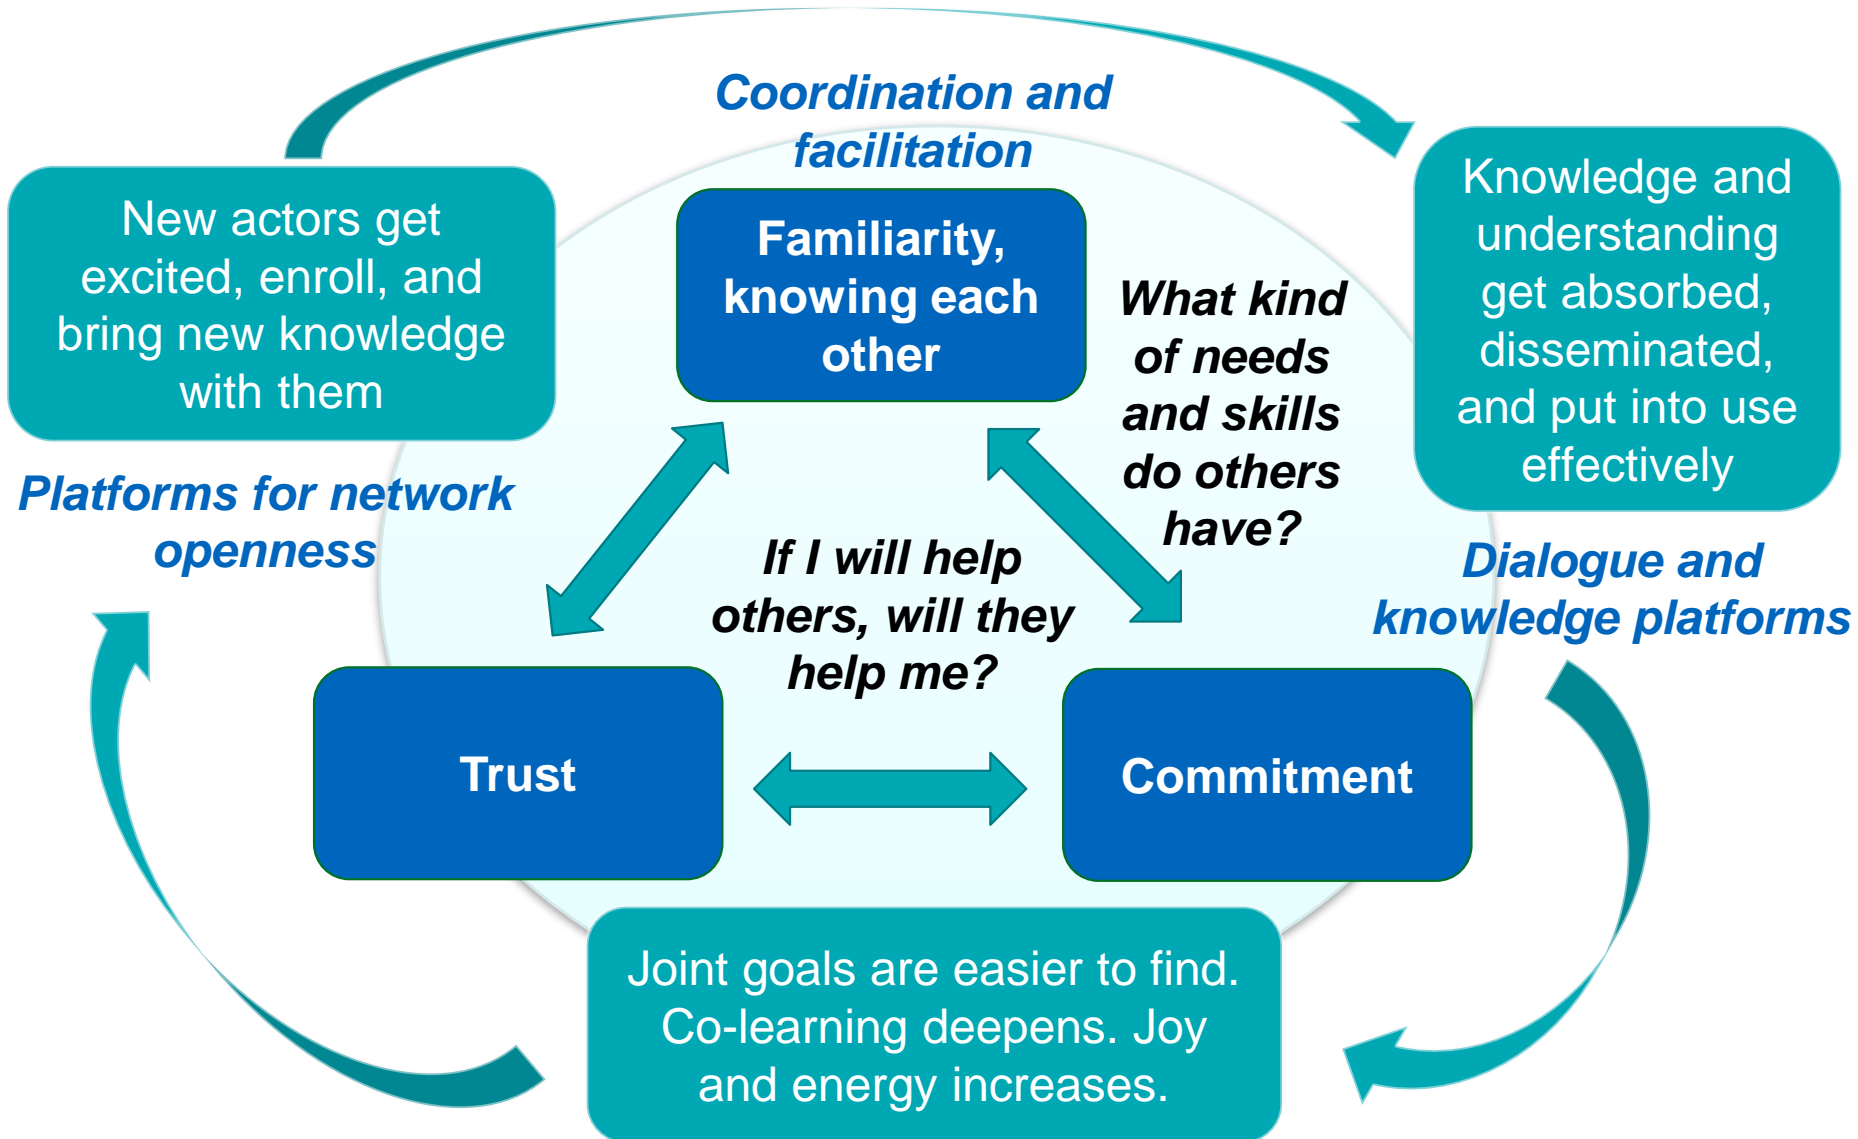

Actors operate based on various rules and norms

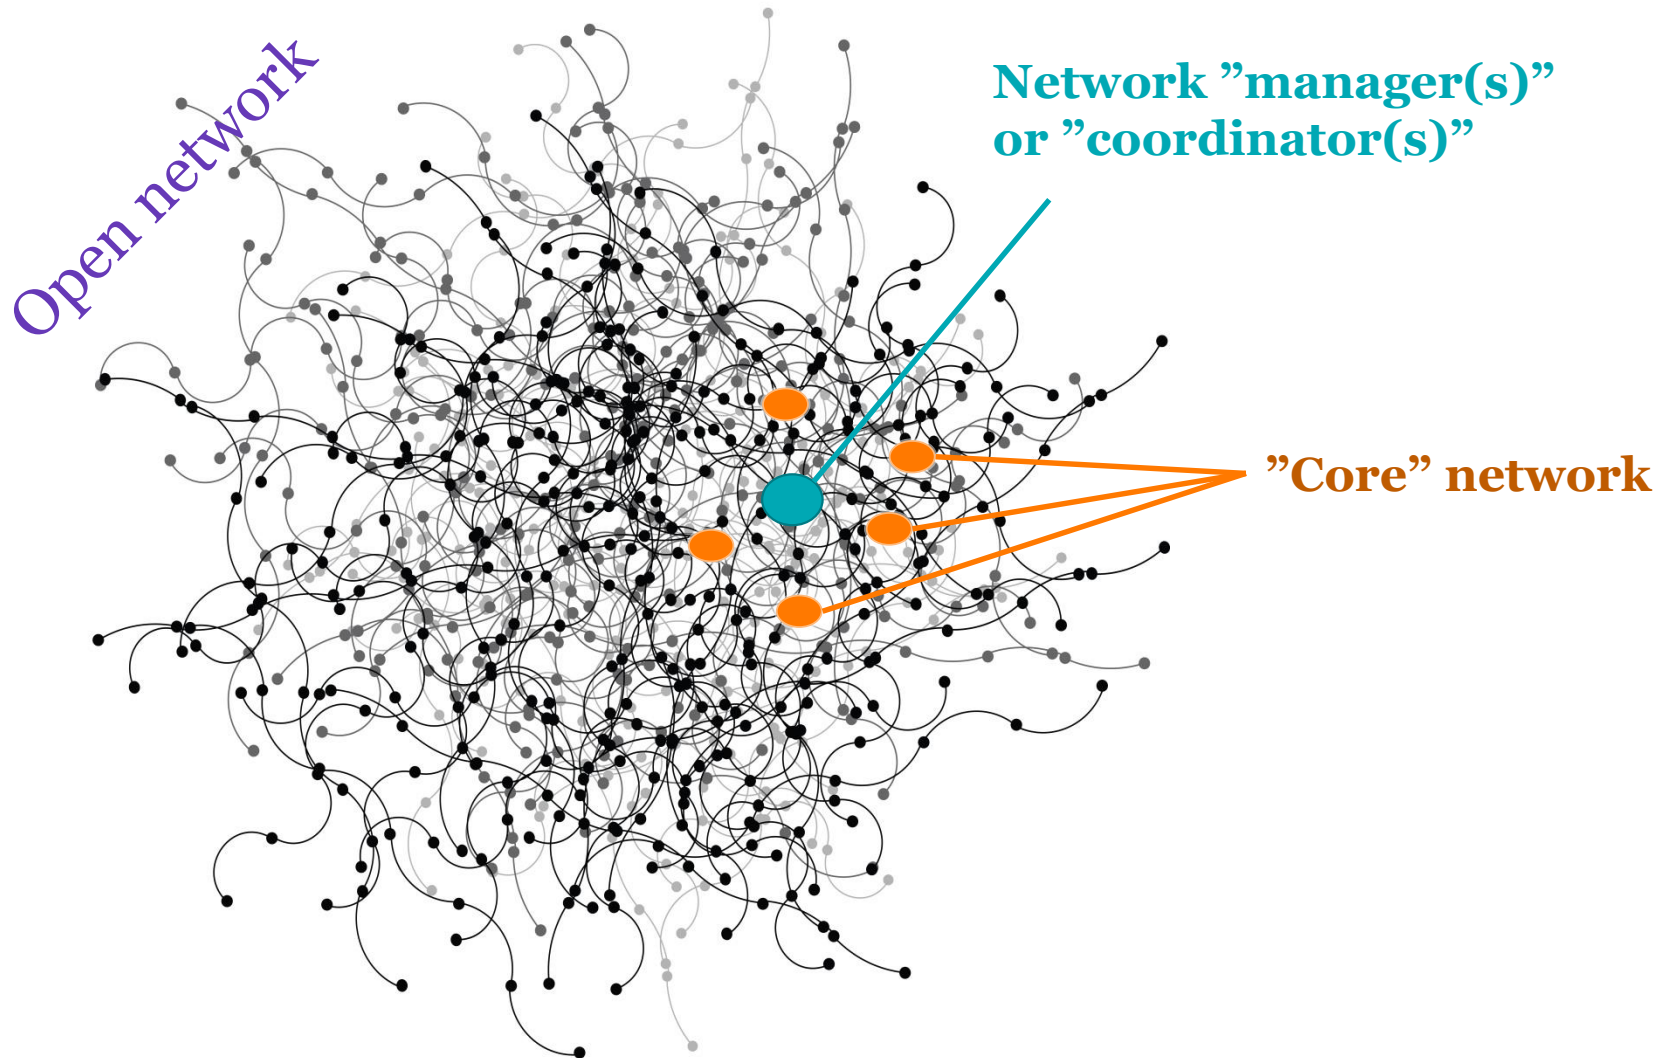

"Jungle" – or "ecosystem" – of network research

Key elements of a functional network

Network management is about *enabling* and *supporting* the development of trust and commitment in an open network

Modes of learning together

Educating

Skills and knowledge passed from knowledge owners to knowledge seekers

E.g. education processes that include lectures and discussions

Managed network, information dissemination

Facilitating

Facilitators organize the process of knowledge co-creation

E.g. learning cafés where experts work together lead by a facilitator

Coordinated network, knowledge creation

Hosting

Hosts offer the platform where knowledge co-creation as a process is co-created

E.g. open space method, the creation of a collective learning 'ba' (mental and physical space of learning)

Self-governing learning network
